Professional Experience

Senior Software Developer, *Netways* 03/2026 – Present
Cairo, Egypt (Hybrid)

- Leading frontend development and mentoring engineers across **enterprise-scale applications and Liferay DXP projects**
- Designing and delivering scalable UI architectures using **React, Next.js, Vue.js, Nuxt.js, and Liferay Client Extensions**
- Building and customizing **enterprise portal solutions on Liferay**, including workflows, dashboards, and integrations
- Developing and integrating **backend services using Node.js / NestJS with PostgreSQL and Prisma**
- Collaborating with backend teams on **REST APIs, authentication (JWT/SSO), and system integrations**
- Driving **shared architecture (monorepo, reusable UI/components, centralized logic)** across multiple services
- Implementing **workflow-driven systems (approval flows, SLA logic, dashboards)** in enterprise environments
- Improving performance, scalability, and maintainability across frontend and backend layers
- Leading code reviews, architecture discussions, and enforcing best practices

Senior Front-End Developer, *Velents.AI* 04/2025 – 02/2026
Riyadh, Saudi (Remote)

- Led frontend development across multiple **AI-powered enterprise platforms**
- Designed and implemented **scalable frontend architectures** using **Vue.js, Nuxt.js, React, and Next.js**
- Built **complex dashboards, workflow systems, and data-driven applications** for enterprise clients
- Collaborated with backend teams on **API integrations (Node.js / Python), real-time systems, and authentication flows**
- Acted as **Acting Tech Lead**, owning frontend architecture, standards, and technical decisions
- Developed **component-driven UI systems and reusable design systems** across multiple products
- Improved performance (Core Web Vitals +35%) and reduced production bugs via better architecture and CI/CD
- Worked on **enterprise-grade systems with workflows and approval processes**, similar to portal-based architectures (e.g., Liferay-style systems)
- Integrated AI services and backend pipelines into responsive, scalable frontend experiences

Front-End Developer, *Hectar App* 09/2024 – 03/2025
Riyadh, Saudi (Remote)

- Developed and maintained production-grade applications using **Vue.js and Nuxt.js**
- Built **enterprise dashboards and internal systems** with focus on scalability and performance
- Refactored legacy codebases to improve maintainability and performance

- Created reusable component-based UI systems to accelerate development
- Collaborated with backend teams on APIs and ensured smooth deployments

Education

Bachelor Degree in Computer Science, 09/2020 – 08/2024
Faculty of Computers and Information (Menoufia University) Egypt

Skills

Frontend
Vue.js Nuxt.js React.js, JavaScript (ES6+), TypeScript, Vite

Backend
Node.js Nest.JS Express.js PostgreSQL MongoDB

Styling
CSS Tailwind CSS Vuelify , Responsive Design

APIs
REST APIs OpenAI APIs

Platforms
Liferay DXP (Client Extensions, Workflows, Integrations)

State Management
Context API, Redux, React Hooks

Testing & Tools
Jest Git GitHub

Other
PWA, SEO, React Router

Projects

SAFHA, *AI-powered document automation platform designed to extract, validate, and structure data from complex documents while enforcing strict business rules and compliance requirements.*
- Buill and maintained scalable frontend modules to visualize extracted data, validation results, and workflow slates with high accuracy and clarity.
- Collaborated closely with Al and backend teams to consume structured outputs from NLP and document classification pipelines.
- Supported multilingual document processing, including native Arabic content, ensuring correct rendering and user-friendly review flows.
- Improved usability and performance for large document sets, reducing manual review effort and accelerating processing time for enterprise users.

Agent Hub, *Enterprise-grade Al platform for building and managing Arabic-first voice and messaging agents across WhatsApp, IVR, and web chat channels.*
- Developed frontend interfaces for creating, configuring, and monitoring Al agents, including conversation flows, integrations, and execution status.
- Integrated real-time data from backend and Al services to display agent activity, conversation summaries, and operational metrics.
- Collaborated with backend teams on API contracts and authentication flows to ensure secure and reliable end-to- end interactions.
- Optimized Ul performance and state management to support high-volume, real-time customer interactions.

Tafhana Market, *Live E-Commerce PWA | React.js, Firebase*
Live, production-deployed e-commerce PWA built with React.js, Vite, and Firebase.
- Developed responsive Arabic RTL interfaces with reusable React components.
- Implemented authentication, role-based access, and admin dashboards.
- Managed application state using Context API and custom hooks.
- Optimized performance with Firestore pagination, infinite scrolling, and dynamic search.
- Integrated shopping cart, favorites, order management, and PWA capabilities.

Velents ATS System, *Al driven Applicant Tracking System used by startups, enterprises, and government entities to manage recruitment pipelines and candidate evaluation.*

- Built and optimized core Ul components using Vue.js and Nuxt.js to support large-scale recruitment workflows.
- Implemented role-based dashboards, interview scheduling flows, and pipeline management features used daily by recruiters and hiring managers.
- Collaborated with Al and backend teams to integrate smart filtering.

real-time communication tools, and data-driven insights.

- Improved frontend performance and modular architecture, enabling faster feature delivery and easier scalability.

Faltah.ai, *Al-powered interview simulation platform that evaluates candidates' skills, personality traits, and CV quality through interactive, real-time sessions.*

- Developed interactive interview interfaces using Vue.js, supporting real-time Al responses and dynamic question flows.
- Integrated OpenAI APIs to deliver adaptive interview logic and automated competency analysis.
- Designed a modular frontend structure supporting multilingual content and customizable interview paths.
- Enhanced performance and accessibility, improving usability across desktop and mobile devices.

Hectar Plus,
Web platform for managing real estate companies' operations, properties, and internal workflows.

- Developed and maintained frontend applications using Vue.js and Vuctify.

Built reusable Ul components to support long-term scalability and faster feature development.

- Collaborated with product teams to deliver stable, user-focused interfaces for daily operational use.
